

UltraSite offers tables, benches, planters and trash receptacles made from recycled plastic planks in a variety of styles and colors.

Do you know how recycled planks are made? They contain recycled material, like your every day milk jugs, and divert these products that would otherwise end up in a landfill. See the simple steps below!

- 1** Recycled goods are delivered in large packages and the milk jugs are sorted out, removing any non-usable product.
- 2** Milk jugs are sent through a grinding process to produce lightweight flakes that are then washed to remove glue, paper labels and further contamination.
- 3** Cleaned flakes are pelletized to remove any remaining contamination and the pellets are mixed in large 300K pound silos.
- 4** The mixture is then sent through an extruder to produce a recycled plank with uniform material, color and consistency.
- 5** Enjoy your recycled plastic bench by UltraSite knowing you are supporting the generations of the future!
